

OVERHAUL OF THE X-AXIS

FOR PLANOMAT 408 AND 412

Timely overhaul of the X-axis at your site will restore accuracy with minimal downtime.

blohmjung.com

A member of the UNITED GRINDING Group

MAINTAINING PRECISION

The X-axes of your PLANOMAT are constantly exposed to high operational stress. A timely replacement will maintain the precision of your surface and profile grinding machine from BLOHM.

Thanks to a new procedure, our service technician can carry out the replacement of the guide rails directly at your location with tools developed especially for this purpose.

A time and cost-intensive dismantling and transport of the machine to

BLOHM JUNG becomes unnecessary. In addition to the reduced costs, it should be emphasized that the downtime of your machine is reduced to a minimum and you can continue working with an overhauled X-axis as soon as possible.

We are also happy to offer you this service as part of a maintenance of your machine.

Precision linear guides

Ball screw drive

OVERHAUL OF THE X-AXIS

- Carried out by a trained BLOHM JUNG service technician
- New guideways and carriages for the X-axis
- New ball screw drive for the X-axis
- Material required for the replacement
